neuronal cells.

New isolated haemopoietin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g.

The haemopoietin receptor (HR) NR6.1 is a form of the novel HR NR6. Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of the inference cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis,

The present sequence represents a murine haemopoietin receptor NR6 (CLF-polypeptide. The specification describes a method for the treatment or prophylaxis of disease conditions associated with dysfunctional haemopoietic regulation. The method comprises modulating the production of hemopoietic progenitor cells in a mammal by administration of NR6. Decreasing production of progenitor cells may be used in the treatment of cancer or to induce apoptosis of particular cell types. Increasing production of progenitor cells is used to facilitate postnatal survival in mammals by inducing or promoting suckling. Potential disease conditions may be identified by monitoring NR6 production in postnatal babies or allowing expectant mothers to undergo foetal testing. Low NR6 levels can then be treated immediately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                            The present invention relates to a biologically active complex comprising a haemopoietin receptor, NR6 and cardiotrophin-like cytokine (CLC). The complex is useful in the manufacture of a medicament for the treatment and/or prophylaxis of a subject, as it is involved in facilitating proliferation, differentiation and/or survival of a cell. The complex or its components have neurotrophic activity. The present sequence is murine haemopoietin receptor, NR6.1 isoform. The NR6.1 represents the NR6 splice variant obtained due to alternative mRNA splicing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6.
Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATCSIHGDTPGATAEGLYWTLNGRRLPSELSRLLNTSTLALALANLNGSRQOSGDNLVCH 120

The present invention relates to a biologically active complex comprising a haemopoietin receptor, NR6 and cardiotrophin-like cytokine (CLC). The complex is useful in the manufacture of a medicament for the treatment and/or prophylaxis of a subject, as it is involved in facilitating proliferation, differentiation and/or survival of a cell. The complex or its components have neurotrophic activity. The present sequence is murine haemopoietin receptor, NR6.2 isoform. The NR6.2 represents the NR6 splice variant obtained due to alternative mRNA splicing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New biologically active complex comprising NR6 and cardiotrophin-like-cytokine, for facilitating proliferation, differentiation and/or survival

The specification describes a method for the treatment or prophylaxis of disease conditions associated with dysfunctional haemopoietic regulation. The method comprises modulating the production of hemopoietic progenitor cells in a mammal by administration of NR6. Decreasing production of progenitor cells may be used in the treatment of cancer or to induce apoptosis of particular cell types. Increasing production of progenitor cells is used to facilitate postnatal survival in mammals by inducing or promoting suckling. Potential disease conditions may be identified by monitoring NR6 production in postnatal babies or allowing expectant mothers to undergo foetal testing. Low NR6 levels can then be treated immediately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1;

```
haematopoietin receptor superfamily, used in the method of the invention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant Up protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, cancer, and allergy)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Murine U4 protein; haematopoietin receptor superfamily; biological activity; cytokine; cell proliferation; cell differentiation; immune suppression; haematopoiesis regulation; immune disorder; immune deficiency; autoimmune disorder; allergy; cancer; myeloid cell; lymphoid cell deficiency; platelet disorder.

The present sequence represents a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to downregulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of zcytor5 could be used to detect cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and therapeutically to modify Zcytor5 ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ARDGSILAGSCLYVGLPPEKPFNISCWSRNMKDLTCRWTPGAHGETFLHTNYSLKYKLRW 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;
                                                                                                                                                                                                                                                                                                                   The present sequence is a murine U4 protein which is a member of haematopoietin receptor superfamily. The protein sequence has conserved cysteine pairs and WSXWS motifs characteristic of the receptor family. It is predicted to have the following biological activities: cytokine, cell proliferation/differentiation, immune stimulating or suppressing and haematopoiesis regulating. The U4 protein can be used to treat immune disorders and deficiencies, autoimmune disorders, allergies, cancer, myeloid or lymphoid cell deficiencies and platelet disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360

                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a composition (I) comprising DNAX cytokine receptor subunit I (DCRS1) protein and DNAX soluble receptor subunit I (DCRS1) protein and DNAX soluble receptor subunit I (DCRS1) protein, which together encode a new mammalian cytokine related receptor (R), or DCRS1 and interleukin B30 (IL-B30) proteins, or DSRS1 and IL-B30 proteins, or DSRS1 and IL-B30 proteins, or DSRS1 and interleukin B30 (IL-B30) proteins, or DSRS1 and IL-B30 proteins, or compounds, which are useful for modulating the physiology or development of a cell or tissue culture e.g. inflammatory responses, innate immunity and/or morphogenic development. (R), antibodies and ligands are useful of for treatment of conditions exhibiting abnormal expression of (R): (R) is useful as a phosphate labeling enzyme to label substrates, and the subunits DSRS1 and DCRS1 are useful as immunogens for generating cutibodies, or as antigens for binding antibodies. Nucleic acids encoding (R) are useful for identifying related DNAs and mRNAs, and variants from other individuals or species. The present sequence represents the present individuals or species. The present sequence represents the present individuals or species. The present sequence represents the present individuals or species. The present sequence represents the present individuals or species are in the composition of the

The present sequence is that of mouse cytokine-like factor-1 (CLF-1), a cytokine receptor family protein, which forms a complex with human interleukin-B60 (IL-B60, see AAB19586). The IL-B60/CLF-1 cytokine serves as a key physiological factor in motor neuron development and regeneration. A claimed soluble complex comprises at least 6 amino acids of mature IL-60B, at least 6 amino acids of mature CNF-R. A claimed method of modulating the amino acids of mature CNF-R. A claimed method of modulating the contacting the cell with an agonist or antagonist of a complex comprising IL-60B and CLF-1 or CNFF-R. A claimed method of screening for a receptor which binds the complex involves contacting the complex into resoluting in a physiological response in the cell
Cytokine-like factor 1 (CLP-1) and interleukin (IL)-B60 complexes, polypeptides, and nucleic acids, useful in research, diagnosis and for treating inflammatory and autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         94.1%; Score 2119; DB 3; Length 407;

It is also useful for treating conditions such as immunological disorders. The present sequence represents a cytokine receptor subunit protein which is given in an alignment of various cytokine receptor subunits in the exemplification
                                                                                                                                                                                                                                                        YWTLNGRRLPSELSRLLNTSTLALALANINGSRQQSGDNLVCHARDGSILAGSCLYVGLP 137

The DCRS2 polypeptide is useful for binding ligands and for preparing antibodies. The DCRS2 polypetide is also useful for modulating cell proliferation, for diagnostic and therapeutic applications, for detecting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            원
                                                                                                                                                                                                                                         The invention describes a composition of matter (I) comprising a substantially pure or recombinant DMAX cyrckine receptor subunit 2 (DCRS2) polypeptide, a natural DCRS2 polypeptide, or a fusion protein comprising a DCRS2 sequence. A composition of matter comprises: a comprising a DCRS2 sequence. A composition of matter comprises: a ubstantially pure or recombinant DCRS2 polypeptide comprising at least to thur amino acids identical to segments of at least four amino acids identical to segments of a substantially pure or recombinant DCRS2 comprising at least two distinct nonverlapping segments of at least two distinct nonverlapping segments of at least two distinct nonverlapping segments of at least two distinct nonverlapping segmence. CC hardonist of a mategoist of a mammalian DCRS2 is useful for modulating physiology or development of a cell or cell culture. Antibodies to a DCRS2 can be used for quantitative detection of interferon. The DCRS2 polypeptides and nucleic acids and their binding agents are potentially useful in treating and diagnosing disease, especially disease associated with the immune system. This is the amino acid sequence of mouse cytokine receptor subunit NRG used in a comparision with DCRS2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     179

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a complex comprising interleukin (IL)-B60, cytokine-like factor 1 (CLF-1) (partner sequence of IL-B60) and CNTF-R (CNTF-receptor). The complex is useful for producing an antigen:antibody complex, useful for treating conditions associated with abnormal physiology or development, including inflammatory conditions and/or autoimmune disorders and for generating antibodies which is useful in diagnostic applications. The present sequence is mouse cytokine-like factor 1 (CLF-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel mammalian cytokines, useful for producing antigen-antibody compley treating conditions associated with abnormal physiology or development, including inflammatory conditions and/or autoimmune disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to mammalian interleukin-B60 (IL-B60). The invention also provides a method of producing a soluble complex comprising the mature protein portrions of IL-B60 and CLP-1 polypeptides. The methods and compositions of the present invention are useful in controlling biology and physiology of mammalian invention are useful in controlling biology and physiology of mammalian cells, such as cells of mammalian immune system, and in particular for regulating activation, development, differentiation and function of various cell types, including haematopoietic cells. They are specifically useful in treating abnormal medical conditions, including immune disorders, such as T cell immune deficiency, chronic inflammation or tissue rejection, or in cardiovascular or neurophysiological conditions. The present sequence is the mouse cytokine-like factor 1 (CLP-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated or non-human host cells transfected with expression vectors having nucleic acids encoding cytokines, useful in treating immune disorders, cardiovascular or neurophysiological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 YWTLNGRRLPS-LSRLLNTSTLALALANINGSRQQSGDNLVCHARDGSILAGSCLYVGLP

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C,Comment: This is one of the short forms (Sla and Slb) of the human prolactin receptor eta-casein gene promoter activation, with Sia less effective than Slb. However, their lited COS-1 and HEK293 cells is due to rapid intracellular turnover of the receptor. #expe

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                feral lung.

IMDUCTION: Up-regulated in fibroblast primary cell cultures under stimulation by IRV-gamma, TRY-alpha and IL-6.

DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cell-surface receptor binding.

BISBASE: Defects in CRLF1 are the cause of cold-induced sweating syndrome (CISS) [MIM:272430]. CISS is an autosomal recessive disorder characterized by profuse sweating induced by cool source characterized by profuse sweating induced by cool abnormalities include a high-arched palate, nasal voice, depressed nasal bridge, inability to fully extend the elbows and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: Cytokine receptor subunit, possibly playing a regulatory role in the immune system and during fetal development. May be involved in nervous system development.

SUBUNIT: Forms covalently linked di- and tetramers. Forms a heteromeric complex with cardiotrophin-like cytokine (CLC); the CELFI/CLC complex is a ligand for the ciliary neurotrophic factor receptor (CNTFR).

SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: Highest levels of expression observed in spleen, thymus, lymph node, appendix, bone marrow, stomach, placenta, heart, thyroid and ovary. Strongly expressed also in

                                                                                                                                                                                                                                          Chen J., Grace A., Chien K.R.; Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.

-!- DOWAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurface receptor binding (By similarity).

-!- DOWAIN: The box 1 motif is required for JAK interaction and/or activation (By similarity).

Development 125.4791.4801(1998).
-1- DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurface receptor binding (By similarity).
-1- DOMAIN: The box 1 motif is required for JAK interaction and/or activation (By similarity).

"Isolation and characterization of two novel forms of the human prolactin receptor generated by alternative splicing of a newly identified exon 11.";
Biol. Chem. 276:41086-41094(2001).
-!- DOMAIN: The WSXWS motif appears to be necessary for proper protein folding and thereby efficient intracellular transport and cellsurace receptor binding (By similarity).
-!- DOWAIN: The box 1 motif is required for JAK interaction and/or activation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,
